

2) Write an HTML script to demonstrate HTML Links

Ans) Below is HTML script to Demonstrate HTML Links

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>HTML Link Demonstration</title>
</head>
<body>

  <h1>HTML Link Demonstration</h1>

  <p>This is a simple HTML page with a hyperlink. Click the link to go to a sample website.</p>

  <!-- Anchor (a) tag used for creating links -->
  <a href="https://www.example.com" target="_blank">Visit Example.com</a>

</body>
</html>
```

In this script:

The <a> tag is used to create a hyperlink.

The href attribute specifies the URL (web address) to which the link points. In this case, it's set to "<https://www.example.com>".

The target="_blank" attribute is used to open the link in a new browser tab.

You can copy and paste this code into an HTML file and open it in a web browser to see the demonstration.

Clicking the link will take you to the example.com website.
