4) Write an HTML script to demonstrate HTML Headings.

Ans) Below is HTML script to demonstrate HTML Headings

```
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <meta name="viewport" content="width=device-width, initial-scale=1.0">
    <title>HTML Headings Demonstration</title>
</head>
<body>

    <h1>HTML Headings Demonstration</h1>

    <h2>Heading Level 2</h2>
    <p>This is some content under Heading 2.</p>

    <h3>Heading Level 3</h3>
    <p>More content under Heading 3.</p>

    <h4>Heading Level 4</h4>
    <p>Additional content under Heading 4.</p>

    <h5>Heading Level 5</h5>
    <p>Text below Heading 5.</p>

    <h6>Heading Level 6</h6>
    <p>Final content under Heading 6.</p>

</body>
</html>
```

In this script:
HTML headings are represented by the <h1> to <h6> tags, where <h1> is the highest level (most important) and <h6> is the lowest level.
Each heading tag is followed by some content (in this case, a paragraph <p> tag for illustration purposes).
When you open this HTML file in a web browser, you'll see a webpage with different headings and associated content.
The browser renders each heading with a different size, with <h1> being the largest and <h6> being the smallest, reflecting their hierarchical structure.
